

The Next Generation in Garage Coatings: *Installed in Just One Day*

plus dozens of
other choices

Updating your garage flooring is an easy and effective way to expand your living space and increase your home's value. SpartaFlex is an advanced, next generation polyaspartic floor coating that can give your garage a durable, cost-effective, and beautiful finish that will last for years!

Older, traditional floor coatings are prone to problems like fading, yellowing, and peeling and can emit noxious odors during application that can linger for days. You can also be inconvenienced as long as 4–7 days after installation of these outdated floors before you can drive your car on them. Next generation SpartaFlex offers the advantages of a zero-odor, 100% environmentally friendly and UV-resistant product that installs in one day and has you driving on your brand new garage floor the following day!

Sounds too good to be true? Wait, there's more. SpartaFlex floor coatings are installed by factory-trained applicators after a thorough and complete floor preparation. First, the floor is cleaned, degreased, and any cracks are filled and repaired using a proprietary compound that is as strong as concrete. Then the pores of the concrete are opened very slightly using an advanced, dustless, diamond floor-grinding system to allow SpartaFlex to achieve the best possible bond with the surface.

After sanding, a neutral-colored prime coat is applied that forms a strong bond with the existing concrete. Then a clear second coat is applied into which colored chips are added, providing the finished

color of the floor. There are many different colors to choose from, ensuring that all homeowners will be able to make their dream garage vision come to life. Finally, a third clear coat is applied to seal your new floor and the process is complete! Within an hour, you are walking on it and moving your personal items back into the garage. The next day, you are driving your car on it! This amazing coating is nearly 20 mils thick, twice the thickness of traditional coatings, and is 4–5 times as abrasion and chemical-resistant. SpartaFlex coatings also offer far more slip resistance than other garage floor coatings that can be as slippery as ice when wet! Best of all, the SpartaFlex floor comes with a 15-year limited warranty.

Midnight Blue

Already have an old, yellowed, and peeling garage floor coating that you're tired of looking at? That old floor can be removed, typically in less than one day, and a brand new SpartaFlex garage floor installed the following day. SpartaFlex clear coatings are available in matte, semi-gloss, and high-gloss and can be used as a sealer over stamped, acid-stained, exposed aggregate, polished, or colored concrete for a clear, durable

finish that can't be duplicated!

For more information on SpartaFlex garage coatings, you can contact Perkins Custom Coatings, a division of the Wm. M. Perkins Company, a company that has proudly been in business in San Diego for over 50 years, at 866-330-1DAY (1329). You can also visit them online at www.PerkinsCustomCoatings.net ○
